Response to McGrath Support Proposal

About BayOne

13 Years

100+ Customers

750+ Projects

Multiple Service Offerings

800+ Strong BayOners

Global Delivery

BayOne Helps Transform Companies

We follow a **customer-centric** approach.
90% of all our customers have been through **direct referrals**!

BayOne's Technology Stack

BayOne Service Offerings

AI Driven IT Support Operations

Business-focused, scalable & cost-optimized support operations. Through our practice, we help our customers achieve ·Guaranteed cost savings.

- IntelliOps framework
- AI / Gen-AI powered accelerators
- Real-time dashboards / reporting
- Matured process & practices

QA & Testing Automation

Matured testing center of excellence provides solutions to customers across the industry verticals.·

- Intelligent Testing Automation framework
- Domain expertise
- Test accelerators
- Matured processes & best practices
- Flexible talent pool
- Global delivery model

UI / UX Services

Unique approach to its customers working on enabling human-centric designs. Our well established & matured COE enables our customers with

- Collaborative Design workshops
- Prototyping & Iterative design
- Customized Design solutions

Application Modernization

BayOne's assessment framework determines if legacy applications should be replaced, lifted & shifted, or re-engineered.

- Assessment of legacy applications
- Classification of app – replace, migrate or re-write
- Cloud Adoption & Migration
- POCs & prototyping

DevOps / SRE Services

Streamline the software delivery pipeline, and reduce time-to-market for new features & updates, ultimately enabling customers to stay ahead of the competition.

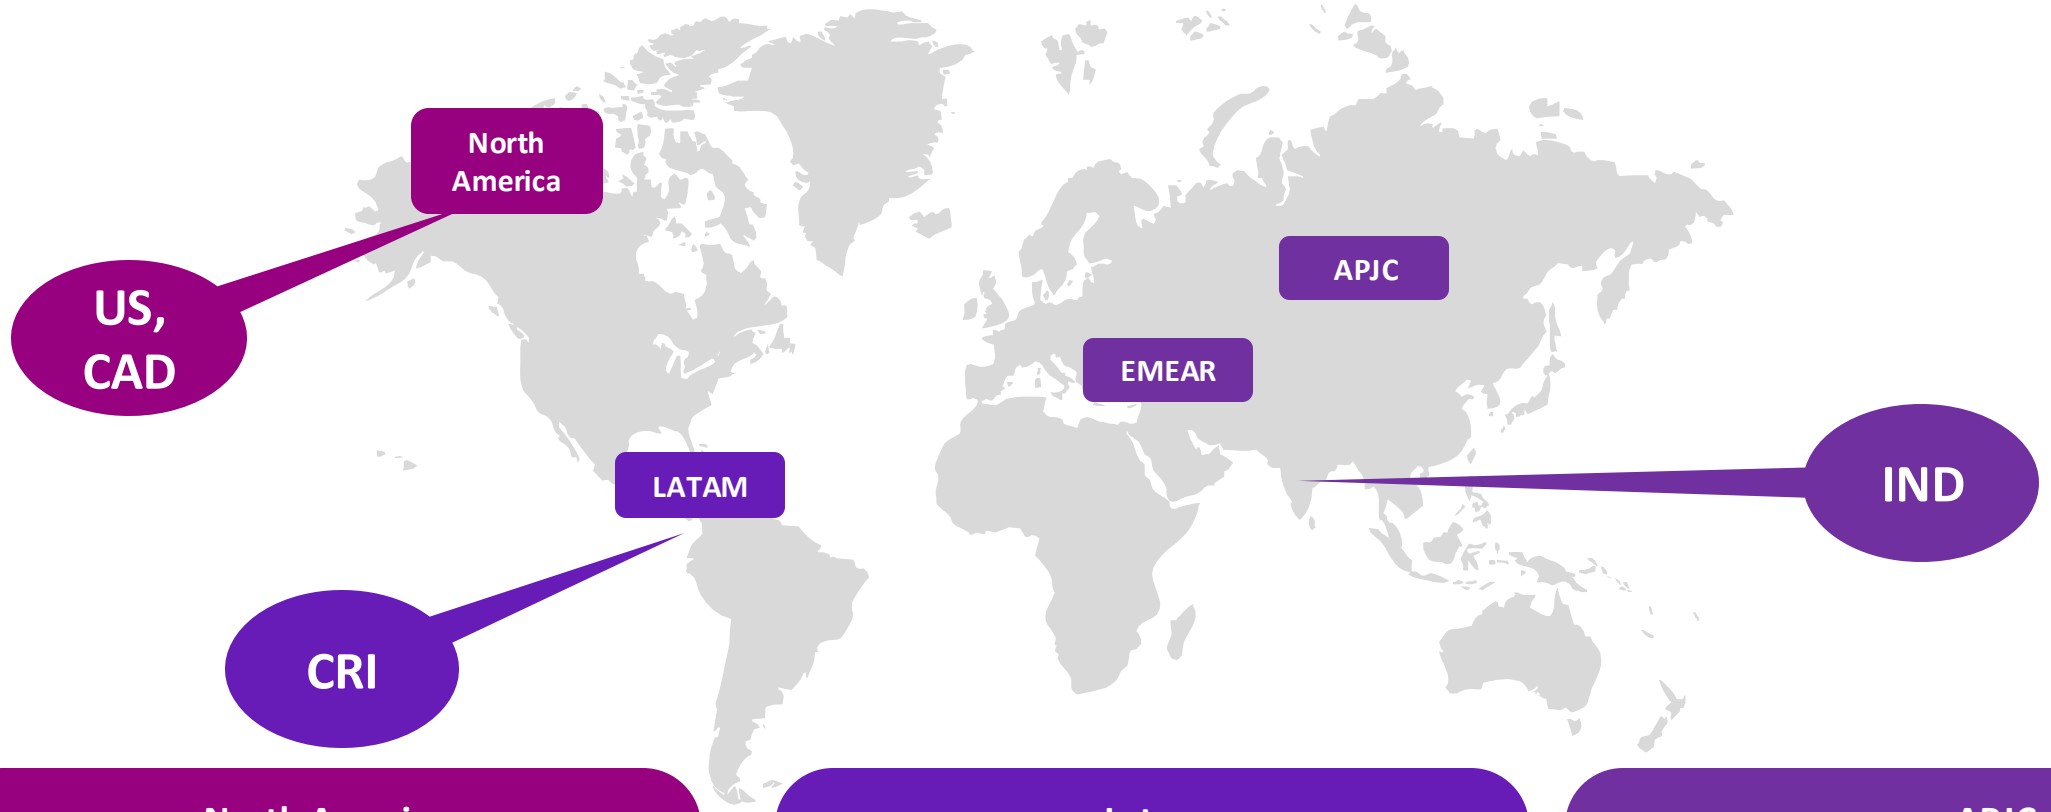
- CI / CD best practices
- Proactive monitoring
- Continuous learning
- Automation
- Dashboards & reporting

PMO / EPMO Services

strategic partner, aligning project initiatives with the client's business objectives and ensuring that investments in IT projects deliver maximum value and return on investment.

- Process Standardization & Automation
- Project / Program Governance
- Dashboards & Reporting

Location Footprint



North America

- On & nearshore model for AMERICAS
- Supports BCP & near shoring strategies for LATAM
- Language – English, Spanish & Portuguese

Latam

- Near shore model for AMERICAS
- Supports BCP & near shoring strategies of AMERICAS
- Language – English, Spanish & Portuguese

APJC

- Support HUB for EMEAR & APJC
- Aligns with BCP & offshoring strategies for global
- Language – English, Arabic, Spanish, French, German, Mandarin Japanese & Korean

Make Tech Purple Initiative

#MakeTechPurple is dedicated to bridging the gender divide in tech through dynamic upskilling and reskilling programs, ensuring women secure and thrive in lasting tech careers.

Community Cohorts

We launch Cohort Programs in collaboration with enterprises to provide 10-15 women from underserved communities with 1-3 months of pro-bono technical training in AI and Software Engineering by expert instructors.

Girl Empowerment

Partnering with Pleasanton Unified School District, we mentor middle & high school girls, offer apprenticeships to high schoolers, & provide scholarships to Girls Who Code, nurturing the next generation of female leaders in technology.

BayOne Delivery

BayOne's female hires grew from 26% to 46% in four years, thanks to fair selection processes, implementing the “Rooney Rule,” and an AI platform sourcing diverse candidates, showcasing our dedication to diversity.

Make Tech Purple

Support Proposal Solution

Exec Summary

ToDo: Escalation Matrix, Assumptions (make it more exhaustive)
Ticket with 3rd party vendor (Oracle, Salesforce) – include it in the workflow
Prod replica Environment for incident recreation / simulation
Non functional requirements (latency, performance issues)
Case studies
AI enablement
RACI Matrix
Validate the assumptions at the end and revise estimates
Executive Summary
Knowledge management through AI

WIP: Neha

Solution Summary

WIP

Expected Outcome & Metrics

Business	Trend
End to end cycle time	↓
Effective communication	↑
Process standardization & simplification	↑
Customer Satisfaction, Ease of Doing Business	↑

Efficiency, Services	Trend
Productivity	↑
Knowledge Management, Training	↑
# of manual touches	↓
Total cost of ownership, management overhead	↓

Transformation	Trend
Automation, Self Serve	↑
AI, GenAI interventions	↑
Overall annual headcount	↓
Transformation speed	↑

Key Enablers

Industry Leadership

- End to end understanding of Support processes
- Expertise in industry tools & technology platforms
- Supporting multiple customers for the similar services

Process & framework

- Best in class operating model & service design
- End to end process visibility & improvement through automation framework
- Assured quality through operational audits

Governance & People

- Strong governance structure for operational excellence
- Flexible Resourcing Model as per customer needs
- Structured induction program & training academy for resource upskilling

RFP Scope Summary – our understanding

WIP

In Scope

Service *	Description
Operational Support	Monitoring systems, managing integrations, restarting stuck workflows, ticket management
Enhancements	MVP backlog, Configuration improvements, changes with <40 hrs per unit efforts
Bug Fixes	Post go-live / implementation defects
Quarterly Releases & Testing	Oracle Fusion quarterly patches, regression testing, production validation
Integration Troubleshooting	Monitoring 50+ integrations, root cause analysis on failures, restarting stuck processes across the MuleSoft/OIC layer
Value Added Services	Automation & AI usage to create support efficiencies to reduce support effort

Coverage & SLAs

- 5 am – 5 pm PST coverage
- 24 hrs P1 Support

Add SLA driven, App support, timeline, model, key applications

Out of Scope

- Engineering development (separate SOW)

** As per the Specific Requirements worksheet in the RFP*

Transformation Journey

WIP

NextGen is not just an Oracle Fusion migration but it's a complete ecosystem overhaul spanning front end CRM, backend ERP, billing, tax, customer portal & massive integration layer changes resulting into

- Customized environment
- Multiple Integration Layers
- Complex systems & processes
- Limited Self Serve Capabilities
- Limited Scalability

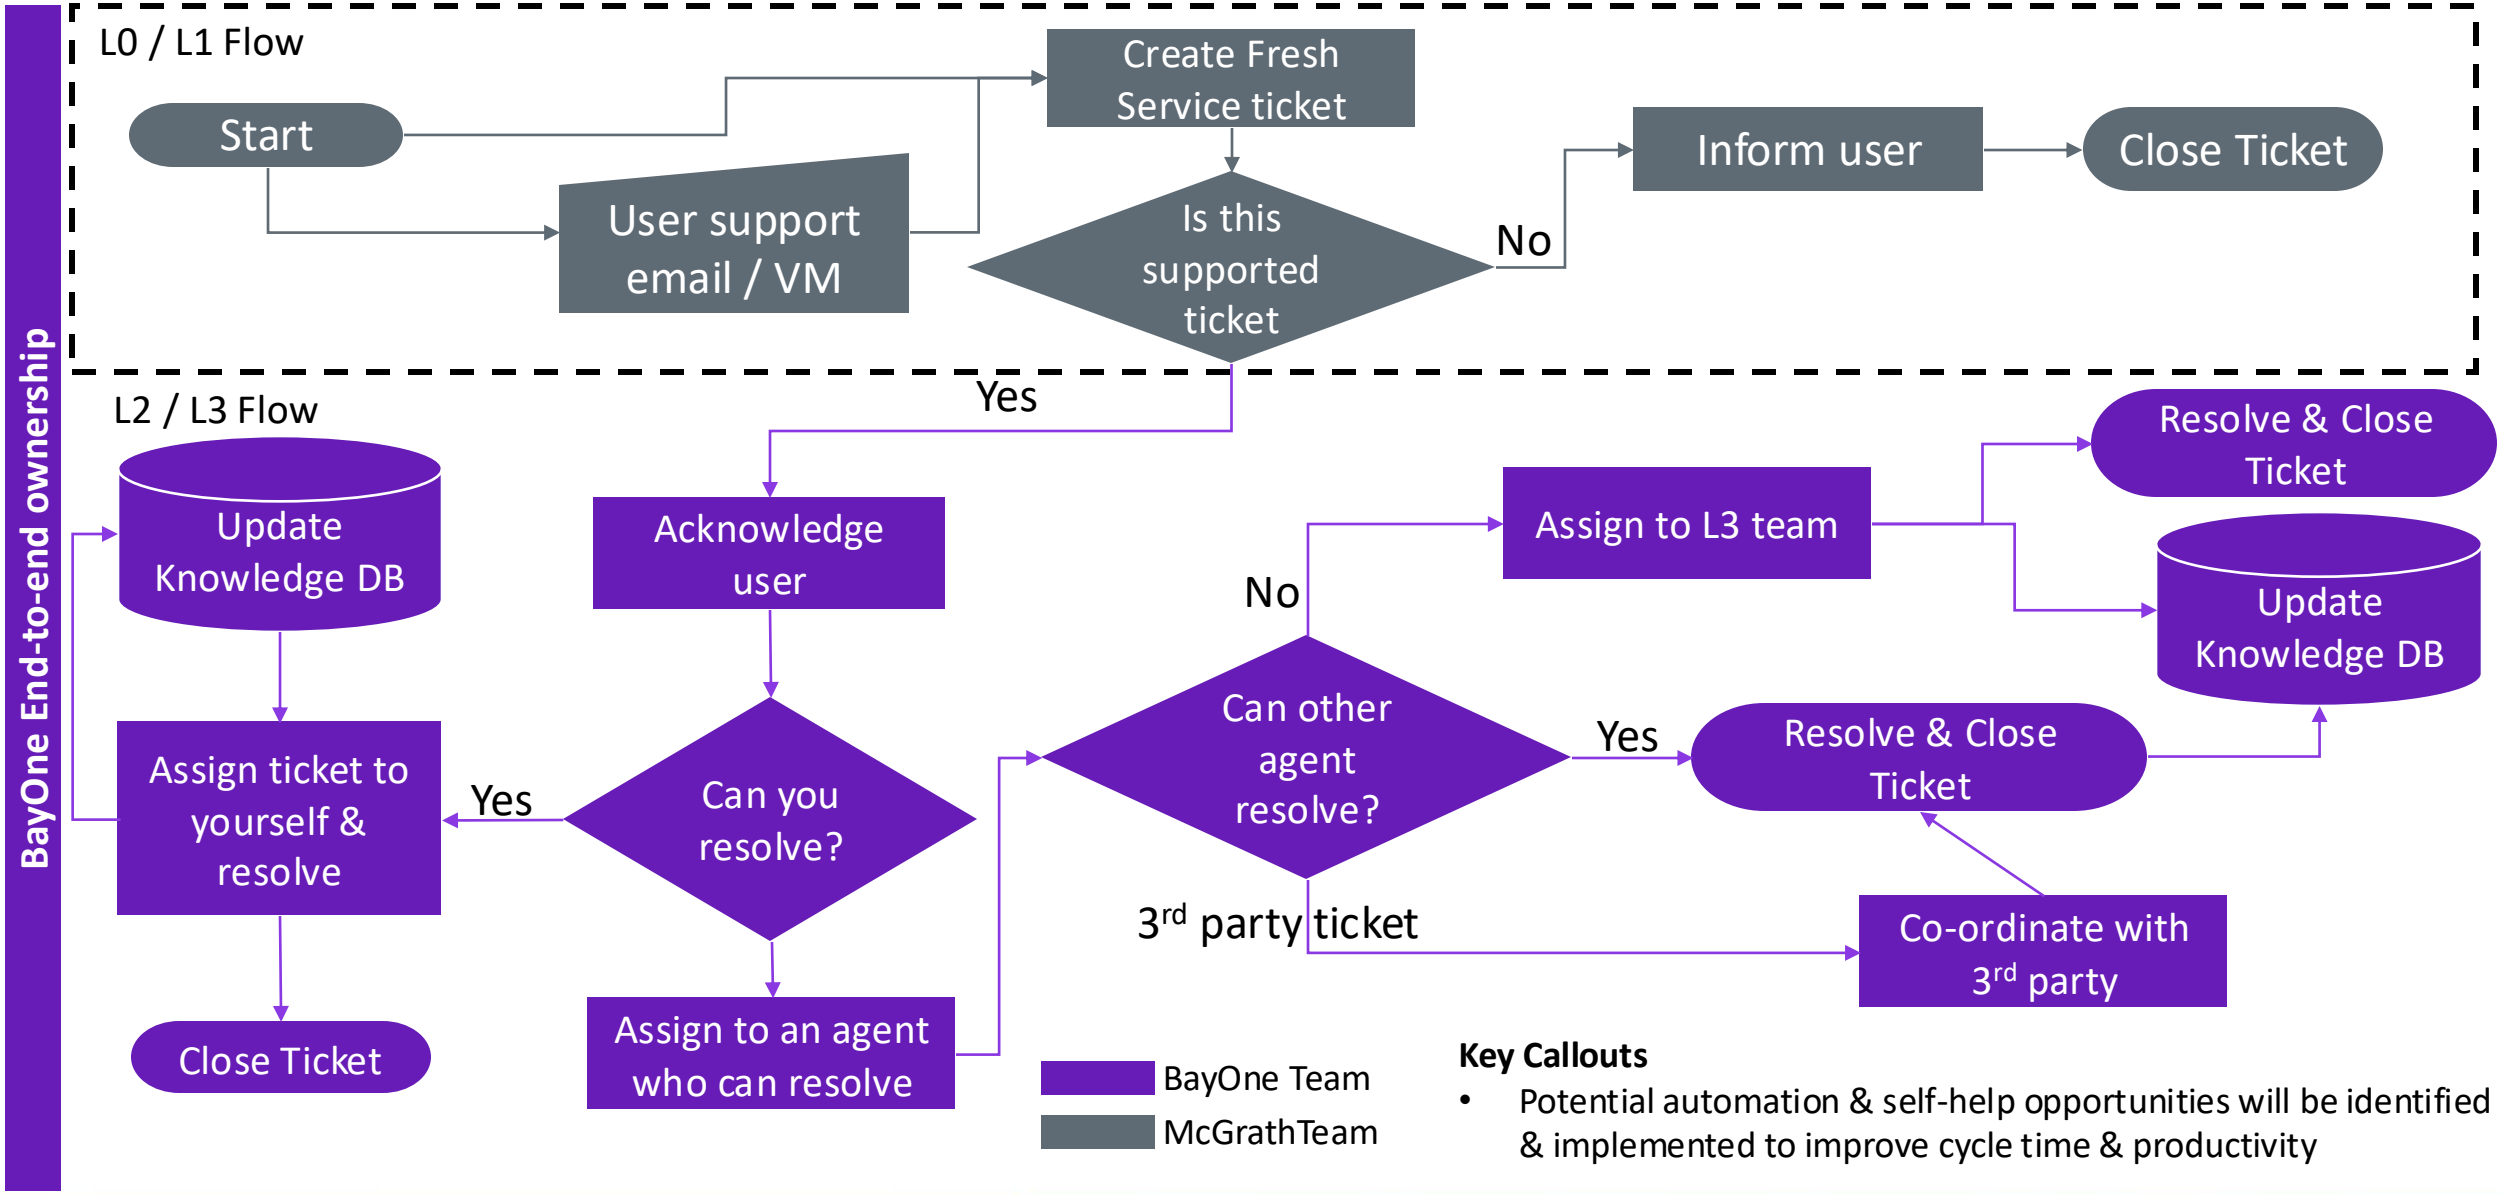
Today

- Simplify & Streamline
- Standardize
- Automate

- Reduced Total cost of ownership
- Industry standard processes
- Reduced cycle time & no-touch support
- Enriched customer self service
- Faster time to market for new business

Tomorrow

High Level Support Process Flow

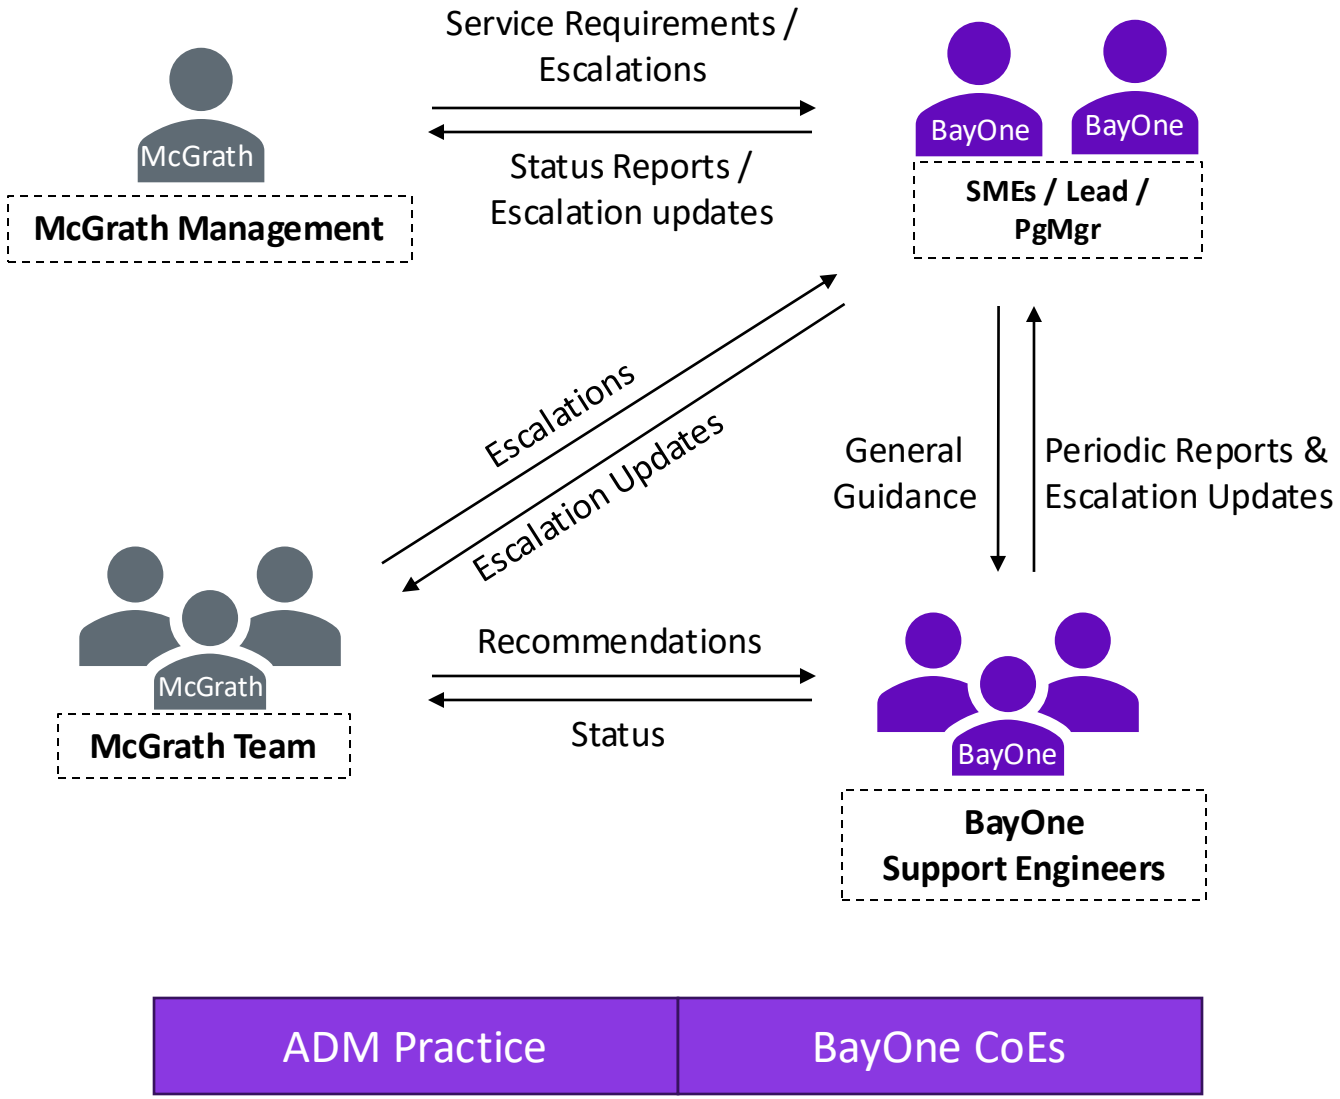


Key Callouts

- Potential automation & self-help opportunities will be identified & implemented to improve cycle time & productivity

Communication Model

WIP

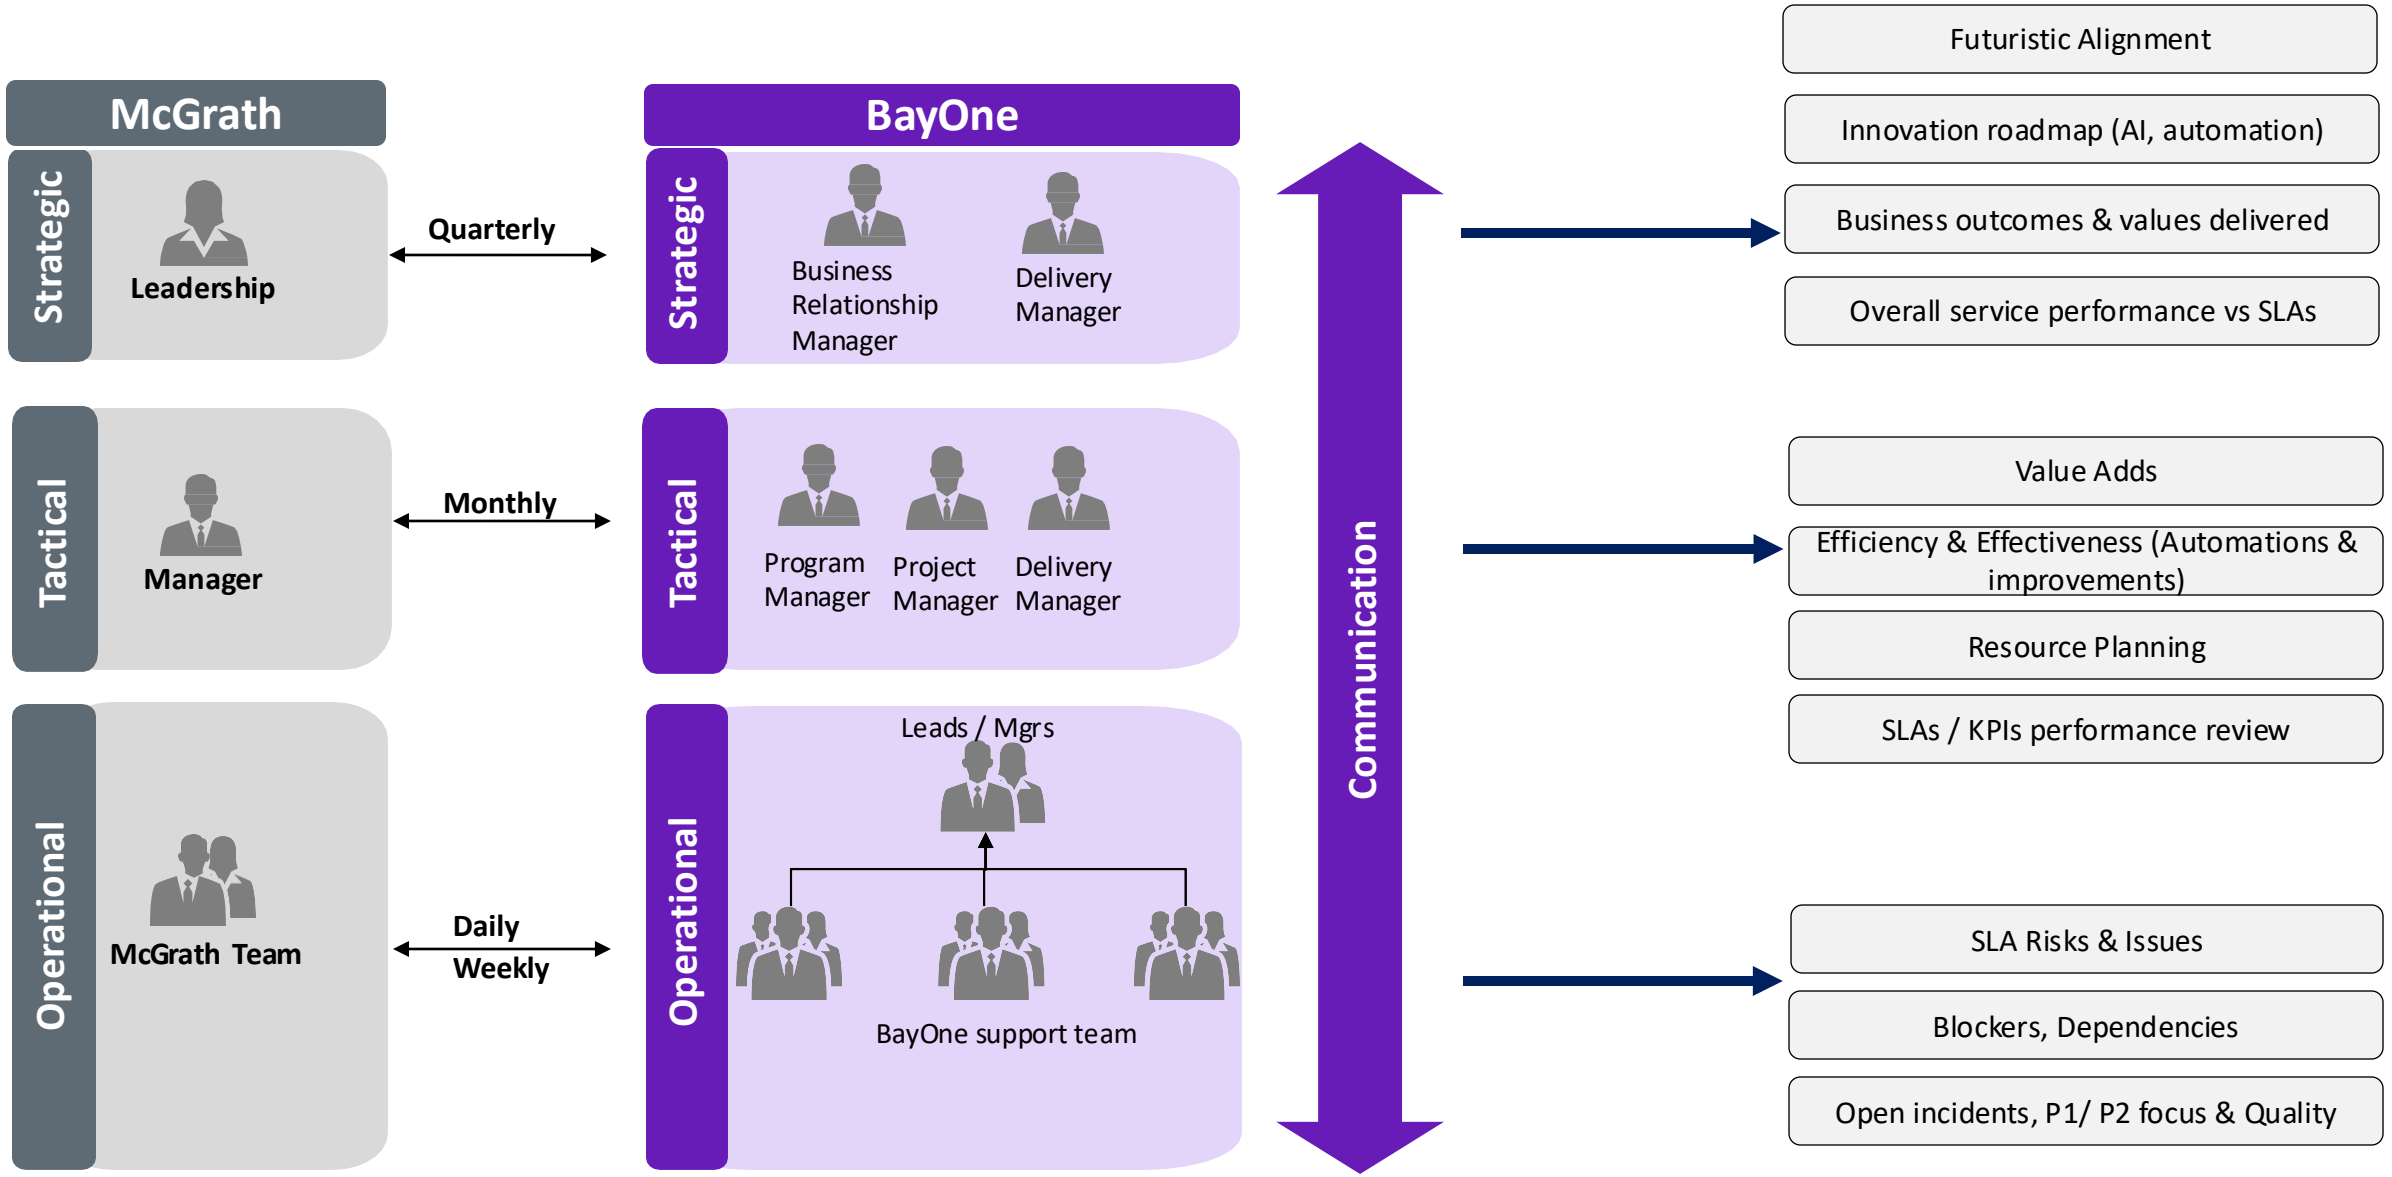


BayOne Escalation Matrix

Escalation Level	Escalate to (Role)	Possible Triggers
Level 1	Project Manager Program Manager	• SLA breach risk • Recurring defects • Minor timelines delays • Resource constraints
Level 2	Delivery Manager cc: Account Manager	• SLA breach • High priority issues not resolved within SLAs • Quality issues • High defect rates
Level 3	Account Manager, Delivery Manager cc: US Sales Head, CTO	• Customer dissatisfaction • Formal complaints • Contractual risks • Commercial or scope decisions
Level 4	CEO, CTO cc: Account Manager, Delivery Manager, US Sales Head	• Strategic account risk • Legal or compliance issues • Significant financial impact

A structured, multi-level escalation framework ensures rapid issue resolution, clear accountability and proactive risk mitigation across onsite and offshore teams.

Managed Service Governance & Reporting



Proposed Coverage

PST	8 PM - 5 AM PST		**5 AM - 5 PM PST**		5 PM - 8 PM PST
India Team	On-call hours				
US Team					On-call hours

Location	Roles	Responsibilities
Onsite team	Functional SMEs - Fusion, Salesforce, Mulesoft, Avalara, RecVue, BI Reporting, Program Manager (USA), Project Manager (India), Custom Application (Customer Hub, NexSTAR), Technical support Engineers	• Managing critical incidents & urgent issues • Collaborating with the end users & business teams • Process management, communication, metrics management / reporting, risk & issues management
Offshore team		• Resolving tickets • Documentation updates, playbook & runbook creation • Minor enhancements • Monitoring

Key callout

- *100% of governance, SMEs, Business Engagement Mgrs and 80% of engineers, operational support team available during 5 am – 5 pm PST windows*

Assumptions

WIP

- In the absence of ticket volume, it is assumed –
  - Monthly ticket volume for L2 / L3 support: ~1400,
  - Complexity ratio – 30% simple, 50% medium & 20% complex
  - Resolution efforts: Simple: 1 Hr, Medium: 3 Hrs & Complex: 8 Hrs
  - P1 / P2 tickets volume < 10%, P3 / P4 > 90%
- On-boarding / discovery phase will be used to baseline the data. Any deviations from above will necessitate a change request
- All the functional stakeholders will be present during the discovery phase (Phase 1)
- Actual resource count may be revised if –
  - ticket count deviates +/- 10% as specified
  - Number of integrations differs from specified in the RFP document
  - Most of the Mulesoft integration will migrate to OIC
- COLA
- Production replica environment is available to simulate & recreate production issues
- Access and escalation coordination with third-party vendors supporting integrations or add-ons
- Structured knowledge transfer sessions and handover documentation from incumbent/implementation team
- Availability of ticketing tools, up to date documentation repositories and communication channels
- Neha to pull more assumptions

Phase 1 - Discovery Phase & Transition

McGrath Responsibilities

- Facilitating KT
- Access to environment, infrastructure setup
- Facilitating collaborative support with the incumbent
- Monitoring progress & reviews
- Providing feedbacks

Preliminary → Knowledge Acquisition → Shadow Support → Reverse Shadow & Ownership

Week 1 – Week 13

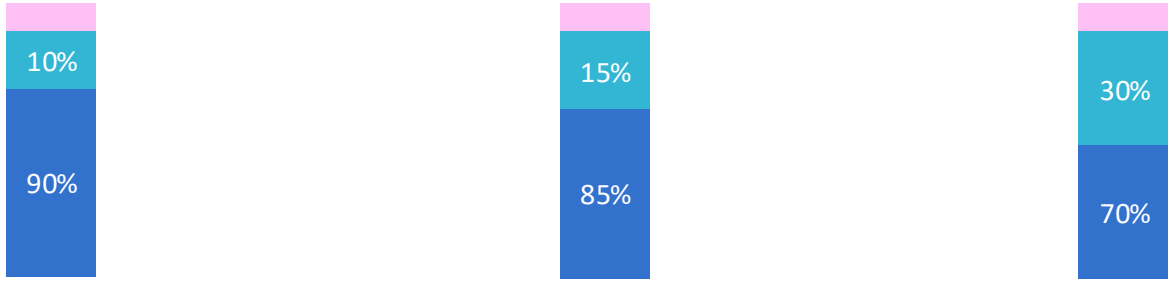
Preliminary	Knowledge Acquisition	Shadow Support	Reverse Shadow & Ownership
***Objective**: transition preparation by establishing plans for KT* ***Activities**:* • Kick off meeting • Access to customer infrastructure email ids etc • Documentation review • Required tools accesses • Risk assessment	***Objective**: gain understanding of processes & tools thru KT* ***Activities**:* • Current Implementation Assessment, system Architecture review • Integration assessment & review • Technical documentation • Test case execution to gain understanding • Data flow overview	***Objective**: observe incumbents for tickets resolution for practical understanding* ***Activities**:* • Attend meetings & calls with stakeholders • Document observed processes & identify areas for more trainings • Doubts clarifications	***Objective**: BayOne team resolves tickets in collaboration with McGrath team & incumbent guidance* ***Activities**:* • Handle live tickets with incumbent supervision • Receive feedback & implement best practices • Ensure process SLA adherence • Knowledge validation

BayOne Responsibilities

Operational Maturity & Value Transformation

	On-board	*Stabilize*	*Optimize*	*Steady State*
	Phase 1	**Phase 2**		
	Q1	Y1 Q1 – Y1 Q4	Y2 Q1 – Y2 Q4	Y3 Q1 – Y3 Q4
Onsite team size	9	9	6	3
Offshore team size	3	22	20	20
	Transition team: on-boarding, knowledge acquisition	*~3300 tickets + 1500 enh hours / qtr*	*~2500 tickets + 2000 enh hours / qtr*	*~1800 tickets + 3000 enh hours / qtr*

Support vs Enhancements efforts



Support capacity
Enhancement capacity
Burst capacity

Key Callout

- *BayOne team will handle +/- 5% spikes (seasonal, month end, qtr end)*
- *Automation and process optimization to reduce operational case volume, enabling a shift toward enhancements and innovation while optimizing overall delivery costs*
- *One integrated team for all the support services*
- *Resource count is indicative due to managed services and excludes PMO & automation office*
- *Burst capacity (variable workforce) can be made available in a short time to manage any unexpected / unplanned spikes*

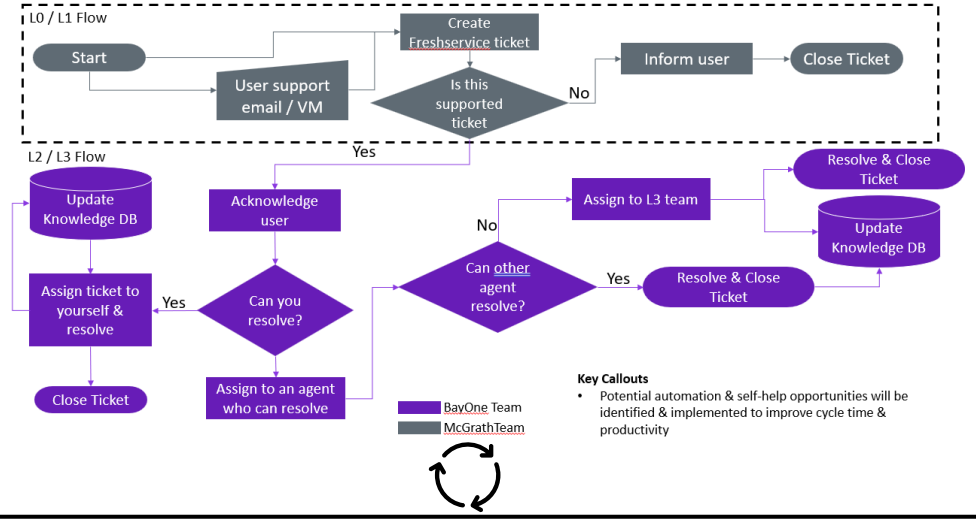
Service Quality Audit Process

Final

On-boarding Phase

Application On-boarding / New feature / Enhancements

Steady State Phase



Value Adds

AI Transformation / Automations / Efficiencies

Continuous quality improvement audit process

Conduct Process Review → Identify Process Gaps / inconsistency → Perform Root Cause Analysis → Update Knowledge repository / Implement improved / standardized process

Key Callouts:

- 3rd party quality control audit process in place at each phase of the service
- Identify & close process gaps & data inconsistency
- Continuous improvement cycle for better service quality

AI Enablement

- Combine multiple data sources (Cisco InstallBase, Network Data, Customer Data) – InstallBase Assessment
- Identify data discrepancy & fix issues – MACDs
- Present accurate & up-to-date IB data to customer – Customer Engagement

WIP

Operational Metrics

- Onboarding time
- Accurate IB
- IB Quality
- CSAT
- MBRs, QBRs

Standardize & Operate

- On-boarding playbooks
- Standardized IBA process
- Audit process

Business Outcomes

- Improved operational efficiency
  - Cycle time to produce accurate view
  - SiteID accuracy, SN Alignment, SiteID & Contract consolidation rate
  - NPS
- Enhanced business continuity
  - Visibility of uncovered assets & contracts, service availability
  - Simplified contract management, on-time renewals

Automate & Accelerate

- Usage of AI / GenAI for analytics insights, preparing MBRs/QBRs ppts
- BOTs usage for customer engagement

Check with Neha if Colin shared this

Key Callouts:

Usage of technology advancement to

- Improve data quality
- visibility of actionable insights
- Improved productivity
- Cycle time improvement
- Self serve capability

Leverage technology & AI intervention to achieve business outcomes faster

Metrics & Reporting

WIP

Category	KPIs
Cost	• Budget conformance • Effort variance for enhancements • Productivity improvement • Cost / case
Quality	• % FTR • % of tickets reopened • CSAT ratings • Enhancement – defects leakage
Time	• %SLA Adherence • Enhancements - Schedule variance • % MTTR • Case Age

Key Callout:

- KPIs to be mutually discussed & agreed with McGrath during on-boarding phase 1
- Phase 2 : Start thru end of 2026 : establish SLA baselines, start tracking & reporting
- Jan 2027 onwards: SLA compliance with applicable remedies
- Detailed list in KPI tab of the response

Risks & Mitigation

Final

Risk	Mitigation
Facilitation of KT & Documentation availability	• Knowledge sharing by existing vendor can become a challenge. McGrath's help to facilitate KT plan will help BayOne team to –
Infrastructure support	• Infrastructure teams will be available & provide necessary support to get environment, system accesses & approvals
Information unavailability	• All information required for the support operation will be shared with the BayOne team by incumbent in a timely manner. Delays beyond a reasonable time may impact the key SLAs
Delayed Sign-offs, Approvals	• Sign off Entry / Exit criteria • All necessary approvals, software required, timely accesses
Uncertainty in • Ticket volume • Current integration stability • Data quality • Complexity of current systems	• Discovery phase (Phase 1), robust knowledge acquisition plan, documenting the current processes, shadow & reverse shadow phases will minimize this risk • Leveraging relevant tools & automation

Risks & Mitigation

Final

Risk	Mitigation
Changing geopolitical scenarios	• BayOne operates out of multiple countries (USA, Canada, Philippines, Costa Rica & India) and continues to grow its global presence
Information sharing by incumbent	• BayOne team is currently embedded in McGrath's ecosystem • Rebadging critical resources with McGrath's approval • Early on-boarding of BayOne's team • Using tools & processes to drive adequate knowledge transition
Knowledge gap due to attrition	• Employee engagement & team motivation • Succession planning for critical resources • Contingent resource pool • Processes & knowledge management to reduce manual dependency

Key Asks

Final

Item	Description
Facilitation of KT & Documentation availability	• Knowledge sharing by existing vendor can become a challenge. McGrath's help to facilitate KT plan will help BayOne team to –
Infrastructure support	• Infrastructure teams will be available & provide necessary support to get environment, system accesses & approvals
Information	• All information required for the support operation will be shared with the BayOne team by incumbent in a timely manner. Delays beyond a reasonable time may impact the key SLAs
Sign-offs, Approvals	• Sign off Entry / Exit criteria • All necessary approvals, software required, timely accessess

Case Study- Oracle Fusion Cloud HCM Implementation for a National Security Agency

Business Scenario

A large-scale national security agency with a complex, multi-category workforce was operating on fragmented legacy systems, spreadsheets, and paper-based processes, leading to data duplication, delayed reporting, and lack of real-time insights. The organization initiated a transformation to modernize HR operations using a unified cloud platform

Scope, Services & Technologies

Scope: End-to-end Oracle Fusion Cloud HCM implementation covering Core HR, Payroll, Absence, Time & Labour, Talent, Learning, and Recruiting
Services: Configuration, data migration (~30,000+ records), integrations, testing (SIT, UAT, payroll parallel run), training, and hypercare support
Technologies: Oracle Fusion Cloud HCM, OIC, Oracle Analytics Cloud, VBCS, Oracle Content Management, OCI, Identity Cloud (RBAC, MFA)

• Solution

- Phased implementation using Oracle Soar methodology (Discovery → Build → Migration → Integration → Testing → Go-live)
- Configured organization hierarchy, payroll rules, leave policies, workflows, and approval hierarchy aligned to agency structure
- Built integrations with finance, identity management, banking, document management, and analytics systems
- Enabled bilingual (Arabic & English) system with secure, role-based access controls

Benefits

- Payroll processing reduced from **12 days to 3 days**
- Leave approvals reduced from **5–7 days to 4–8 hours**
- Data accuracy improved to **98.6%** with real-time reporting
- **78% employee self-service adoption** within 3 months
- Significant reduction in payroll errors (**150–200 to 8–12 per cycle**)

Case Study- Oracle Fusion Cloud HCM Managed Services for a National Security Agency

Business Scenario

Post successful implementation of Oracle Fusion Cloud HCM, a large-scale national security agency required **long-term managed services support** to ensure system stability, handle evolving HR needs, and manage Oracle's quarterly updates—allowing internal teams to focus on strategic initiatives

Scope, Services & Technologies

- **Scope:** Incident management, quarterly updates, enhancements, security & compliance, user support, performance optimization
- **Services:** Break-fix support, regression testing, audit support, training, system monitoring
- **Technology:** Oracle Fusion Cloud HCM (Core HR, Payroll, Absence, Learning, Talent, Analytics)

Solution

- Established structured AMS with **SLA-driven incident management (P1–P4)**
- Managed **end-to-end quarterly updates** (impact analysis, regression testing, defect resolution)
- Delivered **functional enhancements (260 hours across modules)**
- Implemented **security governance (SoD, audits, patching)**
- Enabled **knowledge base, training, and performance optimization initiative**

Benefits

- **95.7% SLA compliance** with 100% P1 adherence
- **Zero payroll failures** and **99.8% system uptime**
- Improved performance (e.g., payroll processing reduced from 4.5 hrs to 1.8 hrs)
- **87% user satisfaction** and continuous enhancement delivery
- Proactive update management preventing production issue

Case Study – Accelerating Reporting for Oracle Fusion ERP

Final

Business Scenario

Global manufacturing enterprise implemented **Oracle Fusion Cloud ERP** across Finance and Supply Chain. While the platform provided standard analytics, business stakeholders required custom operational and statutory reports for reconciliation, regulatory reporting, and operational decision making. Challenges included:

- Limited visibility into supplier liabilities & customer receivables
- Lack of consolidated inventory and procurement insights
- Finance teams relying on manual Excel reconciliation
- Integration reporting required for CRM and tax platforms

Technical Architecture

ERP Data → BIP Data Model (SQL) → RTF Templates → Automated Bursting & Distribution

Capabilities delivered:

- Automated report scheduling
- Email bursting to stakeholders
- Integration extracts for downstream systems
- Finance reconciliation dashboards

Solution Approach

Our team designed and deployed 25+ custom BI Publisher reports across Finance and SCM modules. The solution included:

- Custom BIP data models and SQL queries
- Business-friendly RTF report layouts
- Automated report bursting and email distribution
- Integration extracts for downstream systems

Key report areas:

- **Finance:** AP Aging, AR Statements, Trial Balance, Budget vs Actual
- **Procurement:** Open Purchase Orders, Supplier Spend
- **Inventory:** Stock on Hand, Inventory Valuation
- **Order Management:** Sales Order Status and Fulfillment

Business Outcomes & Impact

- 40% reduction in manual reconciliation effort
- Real-time financial visibility across business units
- Faster month-end closing cycles
- Improved supplier and customer reporting transparency
- Seamless integration reporting with SCM CRM and analytics tools

Impact

The enterprise now runs automated reporting across 25+ business-critical reports, enabling finance, procurement, and operations teams to make faster data-driven decisions.

Case Study – Oracle EBS support

Final

Business Scenario

A global leader in materials, networking, and laser technologies across industrial, communications, electronics, and instrumentation sectors partnered with BayOne Solutions to support day-to-day business operations across more than 30 global sites. BayOne has served as a long-term technology partner for over 12 years, providing ongoing operational support and guiding the enterprise through its digital transformation from Oracle on-premise systems to modern Cloud-based applications.

Services

- Day To Day Operations support on Oracle eBS 11i & R12.
- Upgradation of 11i to R12.2.10
- Merger of Legacy Systems on Oracle Unified instance (EBS & Fusion) for acquired companies. BayOne has provided support on functional, **technical** and Database areas.
- Supporting **Finance, EPM, HCM, Procurement, Manufacturing, WMS, Transportation & Field service modules** and peripheral integrations / applications.
- Managing **monthly / quarterly upgrades**, **regression testing and smoke testing**
- Advising and **Implementing new features** released with monthly/ quarterly upgrades .
- Monitoring of Critical Jobs (Command Centre Set up).
- **Design Development & Facilitate the Oracle BIP reporting on EBS & Fusion both as well as QuickView (Qview)**.
- Manage the **Month-End Activities**
- Partner on **Oracle Cloud Transformation Journey**

Projects Delivered

- Data Migration during M&A
- Functional & Technical activities during the migration & merger of sites all over the globe
- Technical Integration with Kardex with Oracle eBS for Germany
- Procurement Approval Hierarchies based on new MOA rules using AME – CAR Project
- Supporting Global Sites with 90% loading in India
- Export compliance Implementation for different Oracle system

Case Study – C-Worker Transformation

WIP

Business Scenario

- Responsible for managing end to end front & back office support for customer's c-worker program

Scope, Services & Technologies

- Support & manage
  - SOW renewals, JP management, c-worker on-boarding, invoice management through incident resolution
  - L1 / L2 support
  - SLA Adherence – 99%

Solution

- Centralized operations & co-located teams
- Real time data reporting & analytics
- Effective talent management framework
- Enablers – automation & opex projects
- Hypercare planning & white glove service
- Team structuring as per business needs

Benefits

- 20% cost optimization on Day 1
- Seamless transition without business disruption
- Enhanced efficiency & improved customer experience
- Already automated repetitive manual processes resulting in 15% manual effort reduction

Managed Service Commercials

WIP

Phase 1	Year 1	Year 2		Year 3		Total Cost
$ 738,400	$ 4,867,200	$ 3,889,600		$ 2,828,800		$ 12,344,800
		Year 2 savings	20%	Year 3 savings	27%	

Key Callouts

- Pricing assumes a bundled managed services scope and associated efficiencies. Pricing for individual service components may vary if selected separately.
- Year over year optimization includes efficiency gains from stabilization, automation and process maturity
- In the absence of ticket volume for any technology stack, pricing is derived based on few assumptions listed in the assumptions section

BayOne's Advantage

WIP

- **Cost-Effective Solutions**: We offer flexible pricing options to fit your budget without compromising on quality. Provide further service optimizations through automation & taking up additional L2 activities.
- **Security First**: We prioritize the security of your data and network, implementing best practices to safeguard your business.
- **24/7 Support**: IT issues can happen at any time. We're here round-the-clock to ensure minimal disruption to your operations through our global delivery model
- **Customer-Centric Approach**: Your success is our top priority. We tailor our services to meet your unique needs and challenges.
- **Proven Expertise**: Our team consists of certified IT professionals with extensive experience across various industries.
- **Scalability**: As your business grows, our services can easily scale with you, adapting to your changing requirements.
- **Diversity Focused**: Diverse workforce to ensure innovation & deliver higher returns

Sample Profiles (Team Lead)

WIP

Deepak Kumar (L1 Engineer) - Deepak is a results-oriented professional with 7 years of expertise in technical support, application support, and implementation. Proficient in handling cloud-based SAAS applications, he excels in troubleshooting via JIRA and Salesforce. Deepak has led support teams, conducted audits, and utilized SQL for data analysis, ensuring seamless client support and adherence to SLAs.

Responsibilities:

- Spearheaded support operations for a cloud based SAAS application (ERP), ensuring seamless functioning and adherence to SLA's.
- Experience in providing technical support and driving resolution for issues via email and meetings.
- Logged change request or product enhancement request on JIRA if required.
- Collaborated with cross functional teams to analyze and resolve escalated application issues, mitigating risks and optimizing processes.
- Proficiently utilized ticketing tools such as JIRA, OTRS, Salesforce to track and manage support requests.
- Directed a team of 6 associates, fostering a culture of accountability, continuous improvement, and client satisfaction.
- Lead live troubleshooting sessions with customers for faster resolution.
- Leveraged SQL skills to extract and analyze data, providing insights for troubleshooting and decision making.
- Provided Production/Application/Technical support to the client on a 24/7 basis and solving all the issues as per SLA.
- Conducted regular audits of support tickets, providing constructive feedback to team members for performance enhancement.
- Handled and assisted team members with issues related to different clients, end user's request or concern.
- Ability to learn new applications and services quickly.

Divyansh Pandey (Team Lead): Divyansh is a Tech Support professional and Team Leader with 9 years of total experience. He manages high-tier client support and technical issues for SAAS application.

Responsibilities:

- Mentored and guided a team of 20+ employees to foster proper completion of assigned duties.
- Conducted training and mentored team members to promote productivity and commitment to friendly service.
- Built strong relationships with customers through positive attitude and attentive response.
- Supervised team members to confirm compliance with set procedures and quality requirements.
- Created and achieved product quality objectives and met product support guidelines.
- Audited agent interactions, as per guidelines, policy, service level agreements, and regulatory requirements.
- Leverage internal tools and processes to track and report status to clients and stakeholders.
- Resolving tickets weekly, on Salesforce by reporting technical bugs, performing manual testing and/or product configuration requests for clients
- Investigating internal databases using SQL and Sumo Logic queries to troubleshoot technical issues for high tiered clients.
- Identified and resolved problems through root cause analysis and research.

Sample Profiles (L1 Support engineers)

WIP

Vikas Kumar (L1 Engineer) - Vikas, with 7 years of overall experience, has managed L1 inquiries using Conversational Cloud and Zendesk ticketing system, ensuring quality deliveries and adherence to timelines. He has also worked on L1 and L2 call support for different e-commerce websites, providing support to customers in the USA and Amazon-Seller Support. Kumar has good communication skills, worked on Amazon-Seller Support, and established good relationships with departments and colleagues. In his current role, Kumar is responsible for processing online orders and ensuring end-to-end operational processes. He coordinates between customers, vendors, and delivery partners, resolves social media escalation, and manages all social media platforms. He has good planning and problem-solving skills, and is eager to contribute to the success of the company.

Responsibilities:

- Efficiently manage L1 (inquiries) using Conversational Cloud and Zendesk ticketing system, ensuring company processes and SLA adherence
- Exercising problem solving skills to address existing gaps in system and reduce manual effort.
- Ensuring Quality Deliveries and adherence to Timelines.
- Acting as a point of contact to customers query related to billing, devices, network, upgrades and troubleshooting issues.
- Operating through Conversational Cloud to receive emails, chats and calls and manage end to end process.
- Escalate complex issues to appropriate channels (L2) or teams for resolution.
- Navigating through different database, tools and websites to fetch related data ensuring high level of business SLA of operation is achieved.
- Engage in live calls with customers to troubleshoot technical issues, provide support, or address inquiries, demonstrate effective communication and problem-solving skills to ensure customers satisfaction.
- Collaborate with product support teams to triage issues and bugs for resolution.
- Generate reports on standard key Performance indicators

Raksha Singh (L1 Engineer) - Raksha has a total of 3.2 years of experience. She is experienced in Technical Support with overall 3 years of experience in service industry with good communication skills. She is currently working with C-Zentrix as a Technical Support. She holds good experience in email support, CRM and CMS. She has also worked on SQL queries and linux commands. She is having good experience in monitoring bulk whatsapp server.

Responsibilities:

- Monitor Admin Panel along with managing customer data.
- Client Interaction for new projects and managing all verticals including software demos to handling queries.
- Trained trainees regarding software processing.
- Monitoring the Bulk WhatsApp Server.

Employee Engagement

Learning & Development Platforms

- Custom-built for BayOne's service needs

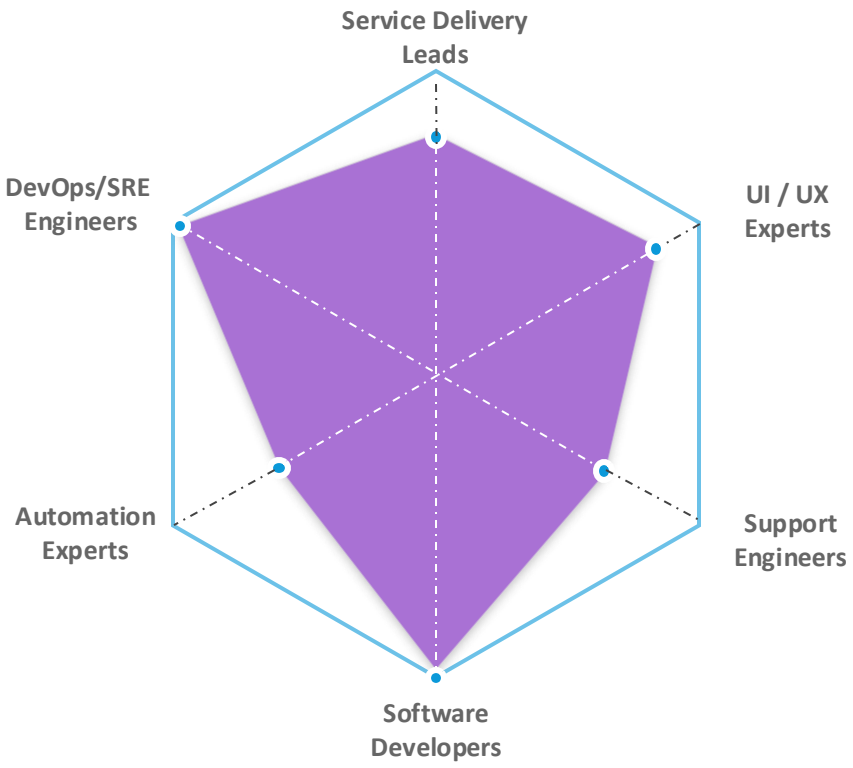
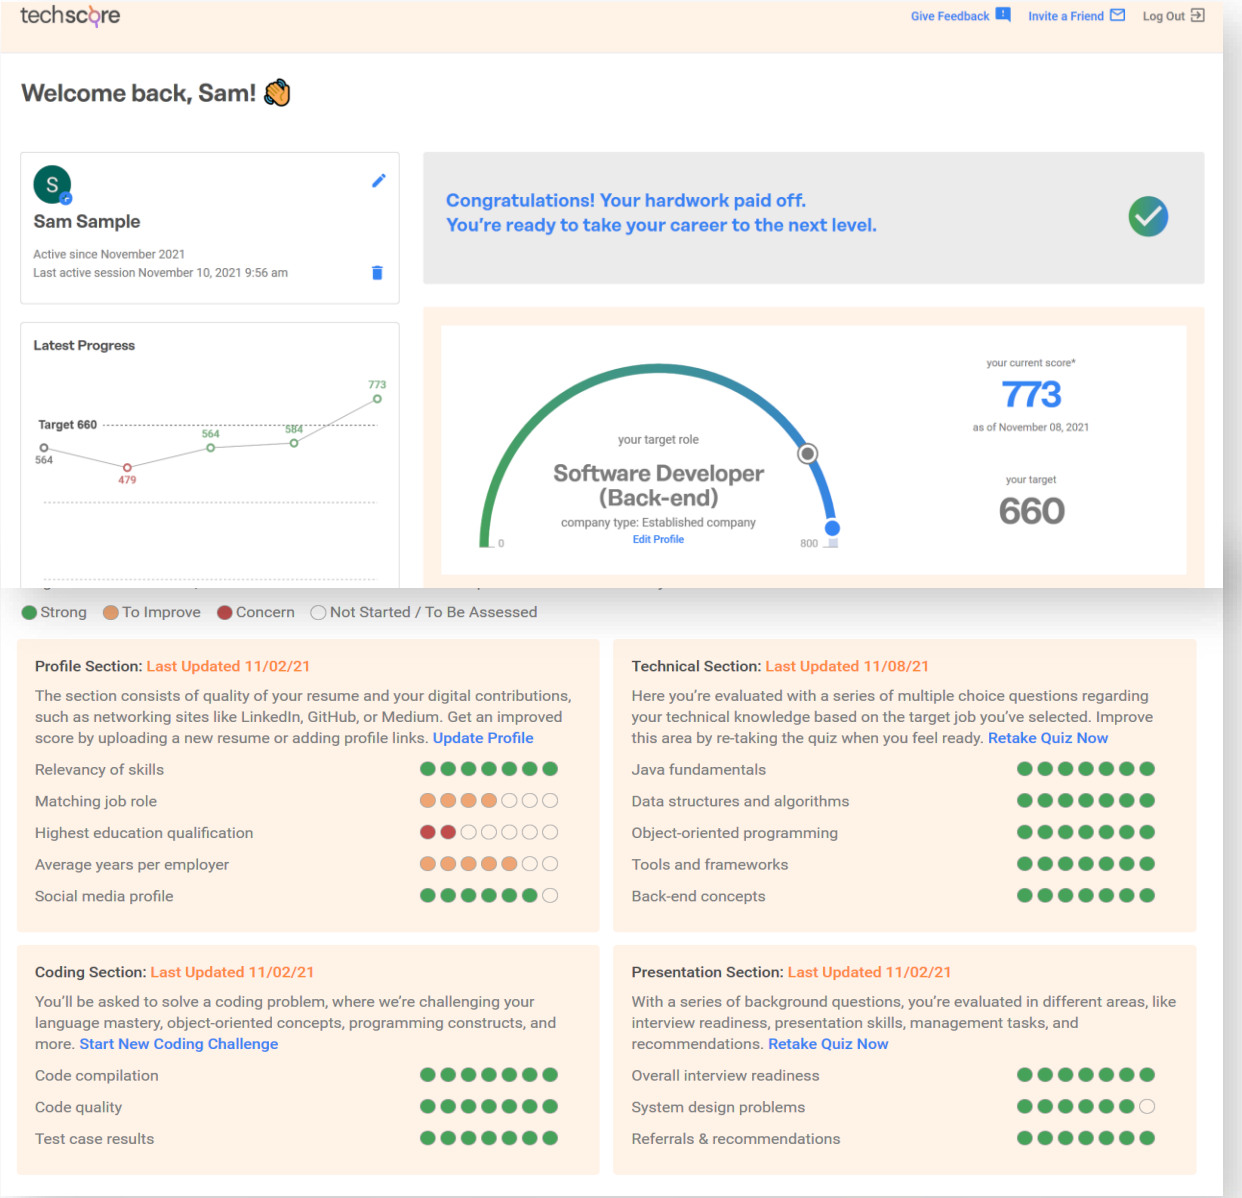
- Automatic assessments & recommendations





Better Service Management

Employee Success

Training &
Development
Employee Retention

Talent Pool Engagement

Always Engaged

Employee Onboarding

Ramp-Up Training
Badging & Access

Better service delivery through **360-Employee Engagement.**

Training & Development

- New Employee Orientation Training
- Regular up-skilling workshops and refreshers
- Knowledge transfer sessions

Employee Retention

- Reward & recognition programs
- Tuition reimbursements
- Bonus structure
- Automated Employee Satisfaction Surveys (ESAT)

Commitment to DEI

Mom Relaunch Program

Mission:
To help women, looking to re-enter the workforce, level up in terms of skillset & placing them at our client's sites

Case Study:
Archana took a career break after starting a family and was looking to re-enter the workforce. She found it difficult to find a job as her skillset and experience were outdated.

With **BayOne's Mom Relaunch Program under Make Tech Purple** initiative, Archana was one of the many women we helped train in Salesforce Developer skills.
Since Archana was an excellent person to work with, BayOne hired her internally as we were switching over to a new CRM software and then eventually got her inducted into customer project

#TheFutureWorksHere.

Measurement By Metrics

WIP

Support Projects

Metric	Benefits	Category
MTTR – mean time to resolve	Enhanced user experience Agent effectiveness	Incident Management
Case Age	Faster issue resolution	Incident Management
Case Hops	Ownership & accountability	Incident Management
Playbook adoption	Case hope reduction Productivity improvement	Standard Processes
Backlog	Stable systems	Incident Management
First Contact Resolution	Support effectiveness	Incident Management
Knowledge Repository effectiveness	Process standardization	Standard Processes
% of incidents eliminated	Stable systems	Problem Management
Automation %	Reduced agent dependency	Incident Management
CSAT	Improved customer experience	Customer Experience

* Relevant metrics will be discussed with McGrath team & tracked

Prerequisites

WIP

- Provisioned access to Salesforce (Prod, Sandbox/UAT), CPQ, integration platforms, and monitoring/logging tools
- Availability of current solution architecture, data model, integration inventory, and CPQ configuration details
- Named SPOCs from Business, IT, and Operations for discovery, validation, and ongoing clarifications
- Access to ticket history, incident reports, release notes, and known issue logs for baseline assessment
- Documentation of all real-time and batch integrations, including endpoints, error handling, and dependencies
- Access to product catalog, pricing rules, approval workflows, discount logic, and custom scripts within CPQ
- Sample datasets and reports to assess data quality, duplicates, and data integrity
- Defined roles, access controls, audit requirements, and compliance guidelines
- Established release, deployment, and rollback processes (or alignment to define them)

BayOne Operations – Quick Snapshot

WIP
